

## Latent Prints Summary Report Test No. 09-517 and 09-518

---

This test was sent to 555 participants. Each sample pack contained photographs of twelve latent prints and four sets of known finger and palm imprints. Participants were asked to compare these and report their findings. Data were returned from 419 participants (75% response rate) and are compiled into the following tables:

	<u>Page</u>
<a href="#"><u>Manufacturer's Information</u></a>	<u>2</u>
<a href="#"><u>Summary Comments</u></a>	<u>3</u>
<a href="#"><u>Table 1: Latent Identifications</u></a>	<u>4</u>
<a href="#"><u>Table 2: Additional Comments</u></a>	<u>24</u>
<a href="#"><u>Appendix: Data Sheet</u></a>	<u>27</u>

This report contains the data received from the participants in this test. Since these participants are located in many countries around the world, and it is their option how the samples are to be used (e.g., training exercise, known or blind proficiency testing, research and development of new techniques, etc.), the results compiled in the Summary Report are not intended to be an overview of the quality of work performed in the profession and cannot be interpreted as such. The Summary Comments are included for the benefit of participants to assist with maintaining or enhancing the quality of their results. These comments are not intended to reflect the general state of the art within the profession.

Participant results are reported using a randomly assigned "WebCode". This code maintains participant's anonymity, provides linking of the various report sections, and will change with every report.

# Manufacturer's Information

Each sample pack consisted of photographs of known finger and palm imprints of four individuals and photographs of twelve latent "crime scene" prints. Nine latent prints were made by the individuals for whom inked imprints were provided; three were from two different individuals whose inked prints were not provided.

Verification: The expected Identifications and Not Identified responses were reported by the predistribution examiners.

The latents were made by persons as follows:

Latent No.	Print Source	
5A	Item 1, Left Thumb	(1LT)
5B	Item 4, Left Ring	(4LR)
5C	Not Identified, -	(NI)
5D	Item 3, Left Index	(3LI)
5E	Item 4, Right Index	(4RI)
5F	Item 1, Right Middle	(1RM)
5G	Item 3, Left Thumb	(3LT)
5H	Item 4, Left Palm	(4LP)
5I	Item 1, Right Little	(1RL)
5J	Item 4, Right Ring	(4RR)
5K	Not Identified, -	(NI)
5L	Not Identified, -	(NI)

## **Summary Comments**

This test was designed to allow participants to assess their proficiency in the identification of latent finger and palm prints. Nine latent prints (5A-5B, 5D-5J) were made by one of four individuals for whom inked imprints were provided (Items 1-4). Three latents (5C, 5K,5L) were from two individuals whose inked prints were not provided (See Manufacturer's Information).

Of the 419 responding participants, 404 (92%) reported the expected nine identifications and did not identify Items 5C, 5K and 5L. One participant reported the individual for Item 5H but not the finger. Another participant reported the finger but not the individual for Item 5B and one participant did not identify any fingers but did report the correct individual for all prints. Six participants did not identify one or more latent prints for which known prints were provided. Four participants reported an inconsistent identification for one or more latent prints. Two participants reported inconsistent identifications for one or more latent prints and did not identify more than one latent print for which known prints were provided.

A few participants noted that 5E contained an additional partial fingerprint located to the right of the intended fingerprint. This additional fingerprint was not intended as part of the examination.

# Latent Print Identifications

Please Note: The number following the webcode represents the test and media the participant received. 517 = Photographs; 518 = CD

# Additional Comments

TABLE 2

WebCode	Additional Comments
339BG9-518	Resolution is still at 1000ppi for latents. While this is the minimum for latents, higher resolution is easily attainable. Having a second readily visible print on the test (block 5E) causes much consternation and possible confusion and should be avoided or addressed with instructions. Print 5G is not consistent[sic] with provided background information. While this does not affect the individualization, it does cause some issues with regards to fabrication.
377AUT-517	Items 5C, 5K, 5L were found to be non-indent to the known finger & palm prints.
3BUDMW-517	5E - the small area to the right of the identified mark bears insufficient detail to identify.
3FMLNH-518	Very good test this time. Images in much better focus.
6X9LD7-518	There was an additional print in the 5E box (to the right of the main print ID'ed to the #2RI of Item 4). The additional print was ID'ed to the #3RM of Item 4, by one analyst.
6XBW33-517	Item 5E has two latent prints visible. The latent prints were identified to the #2 (RI) and the #3 (RM) of Item #4 (L. Piven). Both identifications were placed in the result section (#1) of Item 5E.
7RBQJC-517	There are two suitable latent impressions in image 5E. The finger impression was identified to Item #4 finger #2, the adjacent joint impression was identified to Item #4 finger/joint #3.
AFL7M6-518	5E - Next to the identified right index finger is a fragmentary print in which 6 ridges are in agreement with the second joint of the right middle finger, a reprint is needed for a conclusive comparison of the fragmentary print.
BTTRQ2-517	Items 5C, 5K and 5L - not located/not identified.
CJ28NU-517	*Item 5E contained two impressions. Based on consistency in deposition and in finger height differential (anatomical relationship), the impressions were placed simultaneously. The answer for the larger of the two is listed above. The remaining print was made by the right middle (#3) of Item 4.
CMLNW-517	Additional latent on 5E worked as per regular case - ID as #3 RM of Item 4.
DANNY4-518	LP #5E - Second image of a partial latent print contains some ridge characteristics (points) in agreement. A reprint of completely recorded known prints of Item 4 would be necessary to conduct a conclusive comparison of the second latent print image of LP #5E.
DAV9PX-517	5C supplied POI's excluded. 5K supplied[sic] POI's excluded. 5L supplied POI's excluded.

TABLE 2

WebCode	Additional Comments
EM6UGW-518	Excellent quality test.
GGG9WL-518	5C, 5K, 5L are not identified to the person of interest fingerprints supplied.
JFP4HX-518	The left upper portion of latent mark 5E has 12 matching characteristics against Right Index finger of Item 4. However, it is noticed that the right bottom portion of latent mark 5E was distorted.
K8QF3Z-517	Please note: 5J - RL box ticked in error. Result is as above: 5J - 4 RR.
K9X4FX-517	An additional latent in photo 5E was found to have 5 matching points with the right middle finger of Lisa PIVEN, but was not identified.
KF89XB-517	5D was completed incorrectly: Incorrect box now shown as [X]. Correct box shown as [check in box].
L8C3PP-517	5C was not identified. The pattern flow and recognition in pattern 5 does not compare to nay[sic] of the known fingerprints in test 09-517. The location, type, direction and relationship to the ridge characteristics in pattern 5 could not be identified to any of the known prints of the suspects, supervisor or computer technician. 5K was not identified. Most of the pattern recognition is missing from the volar pad, however, there are a few on the bottom of the print. These characteristics and ridge flow could not be identified to any of the suspects, supervisor or computer technician. In addition, the first joint pattern shape, flow, characteristics, relationship and direction in 5K were not identified in any of the suspects, supervisor or computer technician known prints. 5L was not identified. This palm print appears to be the right hypothenar area. The ridge and flow patterns are down and out to the edge. The pattern flow and ridge characteristics, location, type, direction and relationship to one another could not be identified to the suspects, supervisor or computer technician.
NLXFP2-517	[From Table 1-Latent Print Identifications- 5B "LR"]
NU4TGG-518	5C, 5K and 5L are not identical to the 4 candidate samples supplied.
QXWPWL-517	5C, 5K, 5L Not Identified.
RPFYT2-517	Tests should be sent no later than October.
TDWZGP-517	Item 5E had two latent prints, however only the better latent print was compared and reported.
TRCTLG-517	5C - Pattern flow & recognition in Pattern 5C does not compare to any of the known prints. The location-type-direction & relationship to ridge characteristics could not be Id'd. 5K - Ridge detail was missing from the core of the print a few were noted at the

TABLE 2

WebCode	Additional Comments
	bottom and at the 1st joint however they could not be identified to any known prints. 5L - Palm print right hypothenar area the pattern flow and ridge characteristics could not be identified to any known prints.
UBYELB-517	5E - can get some characteristics in agreement with the medial phalange of the right middle finger on Item No. 4, however insufficient detail to individualise.
UNMUFX-517	Photographs were tacky to touch and there was a strong odour from them that caused me a headache. 5F should read Item No 1 RM - I ticked R1 in error.
VUU4TQ-518	5E had two areas of friction ridge detail but the CTS test did not provide an area to record the result. (12 areas to record results, 13 results)
XFD9R7-518	5C-5K-5L are not found.
XVDZYU-517	As usual, the quality of photographs used is sub-standard and would be required to be redone if they were done in my lab. The 'tricks' employed to make the test more challenging do not simulate real case work but rather create an artificial difficulty common only to CTS Latent Print Proficiency Tests. I welcome the day that a test provider comes along that can provide a test with latents that truly simulate real case work without all of the artificial trickery that CTS resorts to. They will get my business in a heartbeat.
YJP89C-518	Regarding second impression in latent photo 5E, it should have a number/letter designator as it is identifiable. This should have been noticed prior to test distribution and fixed to prevent discrepancy with the number of identifiable latent prints and the answer sheet. There should be thirteen possible answers NOT twelve.
